**DETERMINATION OF NONSIGNIFICANCE**

**Name of Proposal:** MANCHESTER BOAT LAUNCH

**Description of Proposal:** The proposed project consists of a 23 –foot extension on an existing 22.75-foot wide boat launch ramp, located at the Port of Manchester, Washington. A small portion of the existing boat ramp will be removed totaling 0.8 CY in order to attach the proposed ramp extension. Existing substrate will be removed totaling 19.4 CY to allow the boat ramp extension to sit flush with the existing grade and to allow the placement of quarry spalls at the toe of the ramp. Two piles will be driven to secure the proposed ramp extension. These two piles will be located under the ramp extension and will not be exposed to the water or air. All structural components of the boat launch ramp will be pre-cast concrete. The ramp surface will be grouted to the piles to secure the structure. Seams will be grouted to improve structural stability. Quarry spalls wrapped in geo –textile fabric will be placed in an area measuring 4 feet in length and 30 feet in width at the toe of the ramp structure to prevent erosion and to prevent scour caused by power loading of boats onto trailers. The proposed mitigation for adverse impacts to 643 SF of marine substrate consists of removing an old creosote-treated wooden dock remaining on the beach in an area equal in size to the disturbed area.
